

DUNGS Expands Industrial Combustion Solutions Portfolio Through Acquisition of IBS Industrie-Brenner-Systeme GmbH

Blaine, MN, USA | August 11, 2026

DUNGS has acquired IBS Industrie-Brenner-Systeme GmbH, a leading German manufacturer of industrial burner systems headquartered in Hagen, Germany. The acquisition marks a significant step in DUNGS' strategy to expand its Industrial Process Heating Solutions portfolio and deliver a more complete range of combustion technologies to customers worldwide.

With the addition of IBS, DUNGS broadens its offering beyond combustion controls, gas trains, and safety components to include complete industrial burner systems for both high- and low-temperature process applications. The acquisition enhances DUNGS' ability to serve industrial manufacturers seeking integrated combustion solutions that improve performance, reliability, efficiency, and ease of implementation.

"Our aim is to accompany our customers on the journey from component to system, from the individual valve to the complete burner system," said Daniel Dungs, Chief Sales Officer of DUNGS. "In this way, we take the complexity off our customers' hands and deliver engineered solutions so that they can focus on their process rather than the technology behind it."

The acquisition further strengthens DUNGS' position as a single-source provider for industrial combustion and thermal process applications. By combining DUNGS' expertise in combustion controls and fuel management with IBS' decades of burner design and application experience, customers will benefit from expanded solution capabilities and broader technical support.

"In DUNGS, we have found the ideal partner for the next step," said Bernd Machovsky, Managing Director and former shareholder of IBS Industrie-Brenner-Systeme GmbH. "This is a great opportunity for our staff and for the future of IBS. We are proud of what we have built and know it is now in reliable hands."

Strengthening Industrial Process Heating Solutions Portfolio

Industrial manufacturers continue to seek partners that can simplify combustion system design, commissioning, and long-term operation. With the addition of IBS, DUNGS is now positioned to support customers across the complete combustion value chain, from fuel delivery and combustion safety systems to advanced burner technologies and engineered system solutions.

IBS brings more than five decades of experience developing, manufacturing, and servicing industrial burners used in thermal processing applications across a wide range of industries worldwide. These technologies complement the DUNGS portfolio and expand the company's ability to support demanding process heating applications requiring high performance, energy efficiency, and operational reliability.

About DUNGS

Since 1963, DUNGS has been a global leader in clean and safe combustion technologies. The company provides combustion controls, gas trains, valves, pressure regulators, control systems, engineering services, and integrated solutions for commercial and industrial thermal process applications. With the acquisition of IBS, DUNGS now offers a comprehensive portfolio spanning fuel distribution, combustion controls, and complete burner systems.

About IBS Industrie-Brenner-Systeme GmbH

Founded in 1969 and headquartered in Hagen, Germany, IBS Industrie-Brenner-Systeme GmbH specializes in the development, manufacturing, and service of industrial burner systems for thermal processing plants. IBS burners are used globally across a variety of industrial applications and are recognized for their performance, efficiency, and reliability.
